## **DESIGN** RATIONALE

#### CONTEXT

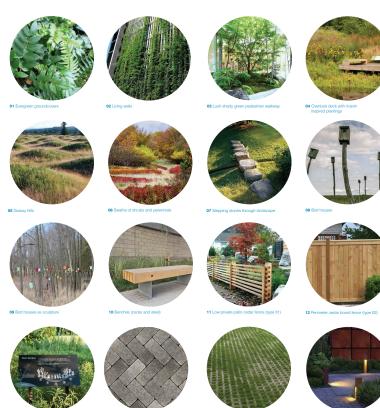

497 Menzies Ridge Drive is a 1.35 acre parcel adjacent to Buttertubs Mersh, in central Nanaimo. Surrounded by single family detached homes, the site is a large, undeveloped lot zoned for higher density, multi-family residential development. The proposed Menzies Townhouses will be situated in a landscape designed to support families of all ages with an emphasis on drawing the character, ecological function and aesthetic of the marsh into the urban environment.

#### DESIGN CONCEPT

The design concept for the Menzies Townhouses is to integrate people, place and plantings into a functional urban ecosystem that accentuates the natural character of the site adjacent to Buttertubs Marsh

- As an expression of the local environment, the planting plan is structured around a foundation of indigenous species that reference shady riparian forests and open marshlands.
- Complementary drought-tolerant ornamentals add character and resilience, and perform vital ecosystem functions necessary to support human life and biodiversity.
- To support the sense of community in a time of physical distancing, outdoor seating areas are situated throughout the development, along internal pathways that unify the site.
- A central open space creates a naturalized play area, with mounds, stepping stone paths and a platform overlooking a densely planted low point designed to evoke the feeling of a marsh. Colourful nest boxes that attract birds into the development emphasize it is location and connection to nature.
- Lush, layered plantings envelop seating areas and pathways.
  This amplifies a feeling of immersion in the local landscape, and
  aims toward low long-term maintenance as plantings become
  healthy, self-organizing systems.
- Living walls literally support plants that attract birds and pollinators, reduce the urban heat island effect, and slow the flow of runoff from developed areas into streams, marshes, and stormwater infrastructure.
